1)Copy the "console.html" file to a newly created folder
(ex:MySite)

2)Create a Dockerfile with the following content:

```
FROM http:2.4
COPY ./MySite/console.html usr/local/apache2/htdocs
```

-The copy command will copy the file from MySite folder to
the container filesystem

3)Create a docker image

```
$docker build -t my-site
```

4)Create a docker container

```
$docker -p 80:80 -name my-site-game my-site
```

5)Open browser and type :

http://localhost:80/myindex.html
